Sage Earth Carbon Accounting - Industry Average Footprints

Built in partnership with Acuity24

Create carbon footprint estimates you can trust

Sage

Challenges

Businesses face significant challenges in calculating a reliable and comprehensive carbon footprint: it is time consuming, requires many data points, and often needs information that may not be readily available.

As a result, many businesses struggle to know where to start in measuring their emissions and understanding how to act to reduce their environmental impact.

The Solution

Sage Earth has developed a powerful API that enables businesses to calculate an industry estimate of their carbon footprint in seconds, simplifying the complex process of carbon accounting and providing a reliable benchmark that enables businesses to embark on their net zero journey.

How it works

The solution requires just business revenue and industry sector to provide emissions data for all scopes of the greenhouse gas (GHG) protocol (e.g., Scopes 1, 2 and 3, including all 15 emissions categories).

The API has been brought to life by Acuity24 in the form of a carbon accounting report, providing users with an understanding of 'hot-spots' in their estimated footprint and the ability to act via a link to Sage's Net Zero Hub.

Methodology

Created by Sage climate experts, the solution combines both financial and carbon data from SWC and CDP, and where possible leverages aggregated Sage SME data, to create reliable data points businesses can trust.

For reporting purposes, the quality of emission outputs produced align to a PCAF (partnership for Carbon Accounting financials) score of 4.

Key benefits

Footprint in Seconds

Calculate a full carbon footprint estimate in seconds by only providing minimal data points (revenue & industrial sector).

Identify Carbon Insights

Understand 'patterns' and 'hot spots' in your estimated carbon footprint to gauge where acting would have the greatest impact.

Actionable Next Steps

Learn how to take action in reducing your business's carbon footprint, by accessing Sage's Net Zero Hub; a space to level up your carbon accounting knowledge and accelerate your business towards net zero.

Data you Can Trust

A solution created by climate experts, and approved by industry leaders, to give you access to *credible, reliable data points*.
